SENSI UP LUX+

In genere, la quasi totalità dei manufatti ceramici presenta una superficie compatta facilmente pulibile, in quanto non vi sono punti dove lo sporco può attaccarsi o incastrarsi. Quando la superficie è lavorata, la situazione cambia e spesso si ha una diminuzione drastica della pulibilità accompagnata da un'elevata sensibilità all'attacco acido. Questo fenomeno, tanto più evidente quanto più è chiara la piastrella, è dovuto in gran parte all'emergere di microporosità in cui lo sporco solido, o comunque non solubile in acqua o nei detergenti, si incastra ingrigendo progressivamente la superficie. ABK con LUX+ introduce un nuovo concetto di finitura superficiale ceramica con cui, tramite un connubio di tecniche applicative e appositi utensili da lavorazione, si può ottenere la completa saturazione della porosità.

In general, the majority of the ceramic tiles presents a compact surface easy to clean, as there are no areas where dirt can attach or get stuck. When the surface is polished, the situation changes and often there is a drastic reduction of the cleanability accompanied by a high sensitivity to acid attack. This phenomenon, the more evident the more it is clear the tile, is due in large part to the appearance of microporosity in which solid dirt, or not soluble in water or in detergents dirt, get stuck and progressively turns the tile surface into gray. ABK introduces LUX+, a new concept of ceramic surface finish with which, through a combination of peculiar application techniques and special polishing tools, you can get the complete saturation of the porosity.

È resistente alle macchie ed allo sporco.
Si pulisce con grande facilità e non richiede particolare manutenzione.

Applies an invisible protection that maintains the aesthetic characteristics of the product and leaves the high glossy effect.
It's stains and dirt resistant.
Easy to clean and requires no special maintenance.

CONSIGLI DI POSA
ADVICE FOR LAYING

POSA TRADIZIONALE
la posa tradizionale è ideale per la realizzazione di pavimentazioni carrabili.

TRADITIONAL INSTALLATION
traditional installation is ideal for floorings that will be driven over by vehicles.

POSA A SECCO SU GHIAIA
La posa su ghiaia permette il perfetto drenaggio delle acque piovane.

DRY INSTALLATION ON GRAVEL
Installing on gravel enables perfect drainage of rainwater.

POSA A SECCO SU ERBA
La posa diretta su erba permette di creare percorsi e camminamenti integrandosi perfettamente nell'ambiente.

DRY INSTALLATION ON GRASS
Installing directly on top of grass enables the creation of paths and walkways that blend in perfectly with the surroundings.

POSA A SECCO SU SABBIA
La posa su sabbia permette di creare percorsi e camminamenti per spiagge e stabilimenti balneari.

DRY INSTALLATION ON SAND
Installing on top of sand is ideal for creating paths and walkways on beaches and beach bars.

POSA SOPRAELEVATA DA ESTERNO
Il sistema di pavimentazione sopraelevata prevede l'utilizzo di supporti portanti di tipo autolivellante, regolabili oppure fissi che si adattano con semplicità e sicurezza ad ogni tipo di pavimento sottostante. Il sistema permette la realizzazione di piani di posa con altezze variabili, da terra, comprese fra 25 e 270 mm. L'indipendenza della pavimentazione dai supporti garantisce l'assorbimento di eventuali movimenti strutturali. Il sistema sopraelevato non necessita di massetto in cemento e consente una diminuzione del peso sulla struttura portante. Le fughe aperte tra una piastrella ed un'altra consentono un facile deflusso dell'acqua piovana evitando tutti i rischi di accumulo o di ristagno. La presenza dell'intercapedine fra il piano di calpestio e il piano di appoggio favorisce l'areazione e l'isolamento termico. Questa soluzione permette inoltre il passaggio di impianti e tubazioni nell'intercapedine, e la facile ispezione degli stessi una volta installata la pavimentazione.

OUTDOOR RAISED LAYING SYSTEM
The raised floor system foresees the use of self-levelling, adjustable or fixed load bearing supports that easily adapt to the floor below in total safety. The system is suitable to create laying designs with variable heights from the ground, which range between 25 and 270 mm. The independence of the flooring from the supports guarantees the absorption of any structural movements. The raised system does not require a cement screed and reduces the load on the bearing structure. The open joints between the tiles allow rainwater to easily drain off, avoiding any risk of water accumulation or stagnation. The gap between the tread surface and the support surface favours ventilation and heat insulation. This solution allows for the installation of systems and piping in the gap, which can be easily inspected even once the floor has been installed.

COLLANTI PER EDILIZIA

Gli adesivi edilizi sono un insieme di sostanze naturali o sintetiche, che, opportunamente applicate, sono capaci di far aderire fra loro superfici di materiali uguali o diversi.
L'azione degli adesivi deriva da fattori interni (composizione, proprietà chimiche delle sostanze utilizzate) ed esterni (condizioni atmosferiche – ambiente umido/asciutto – materiali da incollare – ceramica/pietra naturale/ricomposti – supporto sul quale incollare – massetto/ moquette/laminato – destinazione finale – pavimento/rivestimento/interni/esterni): tali fattori ne determinano la composizione chimica e dunque le differenti tipologie. In generale possiamo affermare che ciascuno di essi viene identificato con una lettera ed un numero in progressione, che ne determina l'upgrade di prestazione: sono tutti universalmente validi.

C1: collante a base cementizia, basico (per materiale ceramico poroso/assorbente o bicottura).
C2: collante a base cementizia migliorato (per materiali ceramici non assorbenti).
F: collante a presa rapida (fast). E' utilizzato per esempio in condizioni di cantiere particolari e in tutte quelle situazioni che richiedono rapidità di intervento.
T: il collante ha un comportamento tixotropico (ovvero antiscivolo: dunque particolarmente apprezzato per la posa su parete di materiali di grandi formati e/o spessori maggiorati).
E: tempo aperto allungato (extended) ovvero il tempo massimo entro il quale il materiale può essere posato dopo l'applicazione dell'adesivo.
S1: il collante è deformabile (stretchy) ovvero ammortizza le tensioni termiche delle piastrelle e della superficie di posa senza danneggiare la superficie installata.
S2: variante migliorata della precedente.

Tutte queste caratteristiche possono coesistere e combinarsi fra loro, dando vita a variegate tipologie.
Il collante è l'ultimo strato prima del materiale scelto per la pavimentazione (legno, materiale ceramico, pietra naturale, etc) e contribuisce alla solidità del pavimento stesso: bisogna dunque non solo applicarlo con cura ma anche e soprattutto scegliere la tipologia idonea al materiale e al cantiere.

As part of the ABK Group since 2015, Hardkoll is a chemical manufacturer qualified in the development and production of building solutions.

BUILDING ADHESIVES

Building adhesives are a mix of chemicals or natural substances providing or promoting adhesion.
Adhesives'strenght is depending on 2 different features: internal (chemical composition and chemical properties of the substances) and external (weather conditions - damp/dry room – materials to glue – ceramics/quarry stones/wood-rest where materials have to be glued - screed/ carpet/ laminate – end use – floor/wall,interiors/exteriors). All these set out the chemical composition and the varieties. The different kind of binding materials are identified by an alphabetical letter and a progressive number, specifying the upgrading performance.

C1: cement glue (for absorbing ceramic materials).
C2: improved cement glue (for not absorbing ceramic materials).
F: fast glue (usually less than 30 minutes); used whenever and wherever fast action is required, even during winter in order to prevent the freezing of the water.
T: tixotropic glue, i.e. antigrip (used for big sizes or extra thick wallcoverings).
E: open extended time (maximum time limit to fix down the material after the adhesive film application).
S1: stretchy glue i.e. thermal and shock absorber .
S2: highly stretchy glue (improved S1 glue).

All these, can be mixedtogether, giving out several types in return.
Binding materials are the last layer before tiles and support the firmness of the floor itself: it is crucial to select the proper one and to apply them properly.

CERAMIC R-EVOLUTION
Il progetto WIDE ABK parte dalla rivoluzionaria tecnologia produttiva CONTINUA+, che permette di produrre lastre in gres porcellanato robuste e leggere allo stesso tempo, grazie allo spessore ridotto di 6 e 7mm, fino alla dimensione record di 160x320 cm.
Il nuovo sistema di pressatura prevede la compattazione a secco delle materie prime e consente di ottenere superfici particolarmente apprezzabili sia per la qualità estetica che per le performance tecniche.

ABK's WIDE collection consists of tough yet lightweight porcelain slabs with a thickness of just 6 and 7 mm and a record size of 160x320 cm produced using the revolutionary CONTINUA+ technology.The new pressing system involves dry compaction of raw materials and is able to produce surfaces that combine excellent aesthetic quality with outstanding technical performance.

WIDE & STRONG
WIDE è perfettamente idoneo sia per il rivestimento che per la pavimentazione, in ambito residenziale e commerciale. Gli spessori 6 e 7 mm consentono di mantenere un'ottima resistenza al carico di rottura reale.

WIDE is ideal as both a floor and wall covering in residential and commercial projects.The 6 and 7 mm thickness enables it to maintain excellent breaking strength in real situations.

LITE GOES WIDE
Gli spessori 6 e 7 mm consentono di ridurre il peso per mq con interessanti vantaggi in termini di maneggevolezza e movimentazione.

The The 6 and 7 thickness results in a reduced weight per square metre, bringing significant advantages in terms of ease of working and handling.

WIDE IS LEVELING
La combinazione fra impasto ad elevata plasticità, spessore e grande dimensione, dona particolare elasticità al prodotto, per ottenere risultati di posa sempre impeccabili.

The combination of a body with high plasticity, thickness and dimensions makes for a highly elastic product that delivers consistently flawless results.

EASY AS WIDE
La formulazione dell'impasto, unita alla compattazione a secco e alla cottura in forni di nuova concezione, genera un gres particolarmente facile da tagliare e lavorare.

The chemical formulation of the body combined with the raw material dry compaction process produces a porcelain slab that is easy to cut and work with.

WIDE MEANS GREEN
L'impasto contiene il 40% minimo di materie prime di qualità recuperate da altri processi produttivi, per questo i prodotti WIDE possono essere accreditati all'interno del sistema internazionale LEED.

As the body contains a minimum of 40% high-quality raw materials recycled from other production processes, WIDE collection products qualify for LEED international certification.

NEW DIMENSIONS
Uno degli obiettivi del progetto WIDE è quello di fornire un materiale ceramico tecnologicamente avanzato facilmente utilizzabile in contesti anche molto diversi, per dimensione e per destinazione d'uso. WIDE è un vero e proprio programma di formati, tutti rettificati, pensati per coprire a 360° le esigenze legate alla progettazione, a partire dagli spazi residenziali, fino alle grandi opere in ambito pubblico e commerciale.

One of the aims of the WIDE project is to supply a hi-tech ceramic material that is easy to use in very different sizes and applications. WIDE comes in a large selection of sizes, all rectified, ideal for uses ranging from residential through to large-scale works in public and commercial spaces.

EVERYWHERE YOU LIKE
Tenendo conto delle principali qualità del materiale, tra cui la robustezza, la resistenza agli sbalzi termici, oltre allo spessore contenuto e alla facilità di lavorazione, le grandi lastre WIDE ampliano la destinazione d'uso del gres porcellanato. Sempre meno fughe e sempre più spazio alla creatività di progettisti e interior designers, che grazie ai prodotti WIDE possono apprezzare la versatilità di una ceramica senza più confini.

Taking account of the material's key qualities, including strength, thermal shock resistance, low thickness and ease of working, the WIDE large-size slabs extend the fields of use of porcelain.The WIDE collection has fewer joints while givingenormous creative freedom to architects and interior designers, who appreciate the versatility of this ceramic surface without limits.

POSA MOVIMENTAZIONE DELLE LASTRE
Durante le verifiche preliminari sul cantiere è opportuno accertare anche la possibilità di movimentare facilmente le lastre all'interno dei locali di posa. Tutti i formati che superano i 100 cm sia di lunghezza che di larghezza devono essere maneggiati da 2 posatori. Per una corretta gestione delle lastre, a partire dalla fase di apertura degli imballi, è necessario avvalersi di dispositivi idonei per la movimentazione.
Per la movimentazione manuale e la successiva posa in opera delle lastre WIDE 160x320, al fine di garantire la sicurezza per gli operatori e l'integrità del materiale, è vivamente consigliato l'utilizzo di barre di movimentazione con ventose. 1
Per gli altri formati WIDE inferiori può essere sufficiente l'utilizzo delle sole ventose, anche in relazione allo spessore di 7 mm, che da una maggiore resistenza al prodotto. 2
Gli appositi carrelli di movimentazione sono ideali sul cantiere come "magazzino" per una o più lastre, oltre che per effettuare in totale sicurezza l'operazione di spalmatura dell'adesivo sul retro della lastra. 3

LAYING HANDLING THE SLABS
When performing a preparatory inspection of the site, it is important to check whether the slabs can be handled easily in the installation area. All sizes in excess of 100 cm in either direction must be handled by 2 installers. Always use proper handling equipment to handle the slabs, from unpacking onwards.
When handling and laying WIDE 160x320 cm slabs by hand, use handling bars with suction cups to safeguard both the material and the installers themselves. 1
For smaller WIDE sizes, it may be sufficient to use just suction cups, especially given that the product is 7 mm thick and therefore quite robust. 2
Handling carts are ideally suited for holding slabs on site as well as for applying the adhesive to the back of the slab in total safety. 3

TAGLIO DELLE LASTRE
È opportuno effettuare le operazioni di taglio su una superficie piana, stabile e planare. È consigliato l'utilizzo di guide da taglio professionali con carrello incisore. 4
Una volta rimossa la lastra dall'imballo e posizionata sul piano di lavoro segnare alle due estremità la dimensione da asportare. Posizionare e bloccare la guida di taglio, tenendo conto della distanza del disco di taglio. 5
Incidere le estremità della lastra per circa 5 cm spingendo il carrello di incisione dall'interno verso l'esterno, procedere poi con l'incisione della lastra avendo cura di esercitare una pressione ed un avanzamento del carrello costanti per tutta la lunghezza del taglio.
Traslare la lastra in modo da portare la linea di incisione al di fuori del piano di lavoro di circa 5/10 cm.
Rimuovere la guida di incisione ed iniziare l'operazione di troncatura posizionando l'apposita pinza in corrispondenza della linea incisa; esercitare una pressione leggera e progressiva verso il basso. Quest'operazione risulterà molto semplice in quanto i prodotti Wide sono privi di tensionature e per questo facilmente lavorabili. 6
A questo punto si può procedere con la finitura, che dovrà essere effettuata utilizzando gli appositi tamponi diamantati o in alternativa mediante dischi resinosi abrasivi. 7/8

CUTTING THE SLABS
We recommend cutting the slabs on a flat, stable surface (table). Use professional cutting guides with a cutting slide. 4
Remove the slab from its packaging and place it on the table, then mark the cut at both ends. Locate and lock the cutting guide (make sure to account for the cutting disk offset). 5
Cut the ends of the slab by pushing the slide about 5 cm from the interior to the edge of the slab, then cut the slab in a single smooth, even stroke at constant pressure.
Slide the slab so that the cut line is about 5 to 10 cm beyond the edge of the table.
Remove the cutting guide and shear off the excess material with the clamp located at the cut line; exert gradual, light pressure downwards. This is made particularly easy by the fact that Wide products have no tensioning and are thus easy to work. 6
You can now finish the slab using diamond pads or abrasive resin disks. 7/8

TAGLI A L/SCASSI/ FORI RETTANGOLARI
Una volta tracciata sulla lastra la porzione da asportare è opportuno eseguire, in corrispondenza del punto di congiunzione delle linee, fori di diametro 6/8 mm con foretti diamantati a umido o a secco. 9
Congiungere poi i fori mediante una smerigliatrice angolare equipaggiata con disco diamantato (diametro max. 125 mm) 10

CUTS L CUTS / RECESSED CUTS / RECTANGULAR HOLES
Once you have marked the cut on the slab, drill through the corners of the cut with a dry or wet 6 or 8 mm diamond bit. 9
Now join up the holes with an angle grinder fitted with a diamond disk (maximum dia. 125 mm) 10

INCOLLAGGIO

Le lastre WIDE richiedono l'utilizzo della tecnica a doppia spalmatura, ovvero il collante dev'essere applicato sia sul fondo di posa che sul retro della lastra. 11
Si consiglia l'utilizzo di adesivo in polvere a base cementizia a letto pieno di classe C2F (E) S1 /S2 come Baulite S2 di Hardkoll. 12
Assicurarsi che la superficie da rivestire sia consistente, planare, priva di polvere e di unti/grassi, così come è bene rimuovere le polveri che possono trovarsi a contatto delle lastre.
Stendere il collante sulla superficie da rivestire con spatola a denti inclinati con dente minimo di 8mm con movimenti lineari e mai circolari.
Stendere il collante sul retro della lastra con spatola dentata mai inferiore a 5 mm (tenendo conto che la somma delle spatole utilizzate per sottofondo e lastra dev'essere compresa fra i 13 e i 14mm).
Per garantire la perfetta posa dei prodotti WIDE occorre far defluire per vibrazione le bolle d'aria che si possono formare fra la lastra e l'adesivo fino a ottenere il "letto pieno" di collante. Per fare ciò è consigliabile avvalersi di un battitore manuale in gomma oppure utilizzare gli appositi dispositivi elettrici batti-piastrelle. 13/14
In relazione al grande formato è consigliato l'utilizzo di distanziali livellanti facendo attenzione che lo strato di adesivo fra lastra e massetto sia almeno di 4 mm, per evitare interruzioni nella massa adesiva. 15/16
La fuga minima consigliata, in relazione alla posizione dei giunti di dilatazione, è di 2 mm. Nel caso di pareti e pavimenti a contatto, da posare entrambi con lastre ceramiche, è indispensabile rispettare questa larghezza minima per garantire un perfetto risultato nel tempo. A rivestimento è possibile realizzare fughe inferiori in base alle opportune verifiche tecniche da effettuarsi sul cantiere. Le fughe dovranno essere riempite per almeno i 2/3 dello spessore con l'apposito sigillante, pertanto occorre prestare attenzione all'eventuale presenza di residui di adesivo all'interno.

GLUING

WIDE slabs must be back-buttered; in other words, the adhesive must be applied both to the substrate and the back of the slab. 11
We recommend using a cement-based full bonding powder adhesive, Class C2F (E) S1/S2, such as Hardkoll Baulite S2. 12
Make sure the surface is stable, flat, clear of grease and dust, and also wipe off any dust on the back of the slab.
Apply the adhesive to the surface with an angled tooth trowel (at least 8 mm), in a linear motion (never in circles).
Apply the adhesive to the back of the slab with a toothed trowel (at least 5 mm); note that the sum of the trowel sizes used for the slab and substrate must be 13 - 14 mm.
To ensure perfect installation of WIDE products, use vibration to eliminate any bubbles between the slab and the adhesive to obtain a full bonding effect. Use either a rubber mallet or electric tile vibrator for this purpose. 13/14
When installing large sizes, we recommend using levelling spacers; the layer of adhesive between the slab and the substrate must be at least 4 mm thick to ensure continuity. 15/16
The expansion joint between slabs should be at least 2 mm wide. For contact walls and floors, both installed with ceramic slabs, this minimum dimension must be used to ensure a long-lasting result. A smaller joint width is possible when installing walls, following technical inspection on site. The joints must be filled to at least 2/3 of their depth with sealant; take care to remove all adhesive from the joint first.

LOGISTICA NUOVI SISTEMI DI IMBALLO

L'innovazione della gamma WIDE si esprime anche attraverso la parte logistica del progetto. ABK Group rivoluziona il sistema di imballaggio delle lastre ed è a oggi l'unica azienda che ha portato il sistema a cavalletto impilabile alla dimensione di cm 75x246x149, 75x276x147,5, 75x168x109 e 75x26x200.
Questi i principali vantaggi offerti:
-essendo impilabile permette di ottimizzare gli spazi all'interno dei magazzini.*
- la profondità di 75 cm consente di sfruttare a pieno il volume di carico dei container (3 pallets ne occupano perfettamente la larghezza).
- Il posizionamento verticale del prodotto garantisce una maggiore protezione delle lastre durante le fasi di trasporto.
- facilita le operazioni sul cantiere in quanto le lastre si trovano già posizionate in verticale, il materiale è facilmente ispezionabile e removibile per l'installazione.
- le dimensioni complessive del cavalletto consentono maggiori spazi di manovra all'interno dei locali di posa rispetto alle casse tradizionali e agevolano il sollevamento del materiale mediante mezzi meccanici (gru-montacarichi).
-è caratterizzato da un sistema di regettatura che consente di liberare anche 1 solo collo alla volta, senza compromettere la stabilità del materiale che rimane sul pallet, evitando così il rischio di rotture. Le lastre dovranno essere liberate rispettando la sequenza opposta rispetto a quella con cui sono state confezionate, quindi iniziando dall'ultimo collo regettato.

LOGISTICS NEW PACKAGING SYSTEMS

Innovation in the WIDE range is also reflected in the project's logistics. ABK Group has revolutionised the packaging of ceramic slabs and is the only company to have expanded the stacking rack pallet system to the 75x246x149 75x276x147,5, 75x168x109 e 75x26x200 cm size.
This has the following advantages:
- stacking optimises the use of space in warehouses.*
- the 75 cm depth enables full use of container load space (3 pallets fit perfectly side by side). The vertical positioning of the product better protects the slabs during shipping.
- it facilitates work on site, since the slabs are already positioned vertically, making the material easy to inspect and remove for installation.
- the overall size of the rack pallet provides greater space for manoeuvring in the installation area in comparison with conventional crates, and also makes it easier to lift the slabs mechanically (with a crane or lift).
- the rack pallet system employs strapping which allows the user to remove a single package at a time without affecting the stability of the other packages on the pallet, thus minimising the risk of breakage. The slabs must be released from the packaging by reversing the packaging sequence, i.e. starting with the last package to have been strapped on.

Per una corretta movimentazione di casse, cavalletti e pallet si raccomanda l'utilizzo di un carrello elevatore a forche con lunghezza di almeno 2,5 mt e con il posizionamento nella massima larghezza.

Top handle crates, rack pallets and pallets properly, use a lift truck with at least 2.5 m forks at their maximum width.

GRADONE JOLLY

Il gradone Jolly JO di OLMOlab è un pre-assemblato costituito da due lastre in gres porcellanato: la pedata, di dimensione 120x40 cm e l'alzata di dimensione 120x20 cm, tenute insieme perpendicolarmente lungo lo spigolo da una resina ad alta resistenza.

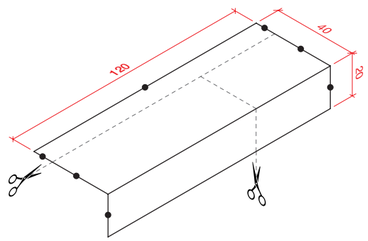
Le dimensioni di questo elemento pre-assemblato sono state studiate per permettere ai posatori, una volta calcolate le reali dimensioni della scala, di ricavarne tutte le parti che compongono il gradino definitivo (un fascione, da cui si possono estrapolare gli elementi laterali e il battiscopa e l'elemento gradino già assemblato).

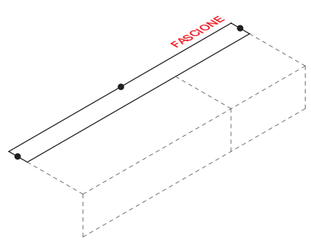
JO, è caratterizzato da una lavorazione "JOLLY" in tutti i lati, in modo da facilitare il lavoro dei posatori nella fase di assemblaggio (vedi puntini neri nel disegno in basso).

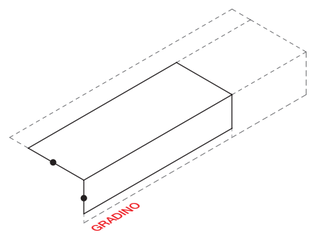
The Jolly JO step from OLMOlab is a pre-assembled unit consisting of two porcelain slabs (a 120x40 cm tread and a 120x20 cm riser) held together at right-angles by a high-strength resin.

The dimensions of this pre-assembled unit are specially chosen to enable tile layers to cut out all the components of the finished step (a strip, from which the side pieces and skirting can be cut, and the pre-assembled step itself) according to the real dimensions of the stairs.

JO comes with mitred edges on all sides to facilitate the tile layer's work during assembly (see black dots in drawing below).

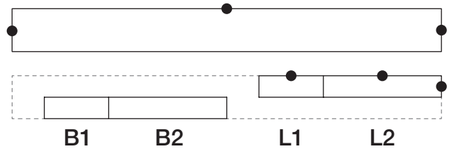






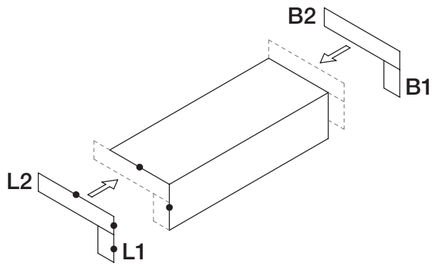
FASCIONE
Dall'elemento "fascione" si possono ricavare i laterali L1 e L2 e il battiscopa B1 e B2.

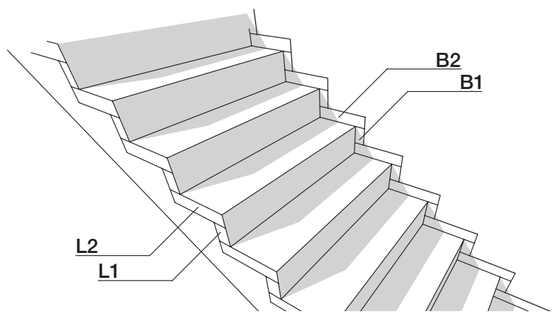
STRIP
The strip can be cut into the side pieces L1 and L2 and the skirting elements B1 and B2.



GRADINO
L'elemento "gradino", una volta rifilata la lastra verticale, riportandola alla giusta dimensione dell'alzata, è pronto per essere posato, presentando i 2 lati "jollati" da assemblare con i "laterali" L1 ed L2. Anche gli elementi B1 e B2 sono pronti per essere posizionati.

STEP
After trimming the vertical section to the correct size for the riser, the step element is ready for installation. It comes with 2 mitred edges to ensure a perfect joint with the side pieces L1 and L2. The skirting elements B1 and B2 are also ready to be installed.





AUTO-LEVELING™

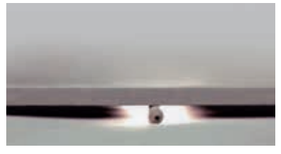
Facile installazione - Easy laying

CARATTERISTICHE

Auto-Leveling garantisce la massima facilità di posa ai listoni di grande formato. La tecnologia si basa sull'impiego di impasti a base di materie prime per loro natura altamente stabili e resistenti, ma al tempo stesso ad elevata plasticità, che conferiscono a questa tipologia di prodotti qualità uniche. Il materiale ottenuto, caratterizzato da un minimo grado di convessità, aderisce perfettamente al massetto. Una volta posata, la piastrella si auto-livella, mantenendo una perfetta planarità. La tecnologia Auto-Leveling si applica alle lastre ceramiche nei formati 20x170 e 40x170 cm (sp9mm).

CHARACTERISTICS

Auto-Leveling guarantees the maximum ease of installation for large-format planks.The technology uses raw materials that combine stability and strength with high plasticity, giving unique qualities to this type of product.The resultant tiles have a small degree of convexity and bond perfectly to the screed.Once installed, the tiles self-level and maintain perfect flatness.Auto-Leveling technology is used for ceramic tiles in sizes 20x170 cm and 40x170 cm (thickness 9mm).



Lastre prodotte con materie prime ad elevata plasticità, resistenti ma flessibili.

INSTA-TILE

DRY FIXING

Le lastre Auto-Leveling nel formato 20x170 possono essere montate seguendo il sistema Insta-Tile, un nuovo metodo di posa a secco che consiste nel fissaggio del materiale direttamente sul pavimento preesistente, senza alcuna opera di demolizione. Dopo aver steso un tappetino in sughero o polietilene dello spessore di circa 2 mm, si consiglia di posizionare una serie di distanziali di 5 mm lungo tutte le pareti interessate per poi proseguire con la posa delle piastrelle, a giunto unito, praticando tutti i tagli necessari fino a coprire completamente il vecchio pavimento.Per contenere le dilatazioni si consiglia di applicare qualche goccia di silicone lungo il perimetro, per poi rimuovere i distanziali e procedere con l'inserimento del profilo o del battiscopa. Il nuovo pavimento, la cui superficie risulterà perfettamente planare anche senza l'utilizzo di colle e sigillanti e potrà facilmente essere rimosso e recuperato in qualsiasi momento.

Our 20x170 auto-leveling slabs can be laid using the Insta-Tile system, which is a new dry-fixing method that consists in laying the tiles directly on top of the existing floor, without any scrapping or removal work. After laying an approximately 2 mm thick cork or polyethylene underlayer, we recommend you fit a series of 5 mm spacers along all the perimeter before laying the tiles. The tiles should be laid with a closed joint and cut where necessary to completely cover the old floor. To limit expansion, it is reconsuded to apply a few drops of silicon around the outer edge, then remove the spacers and fit the edge trim or the skirting. The new floor, whose surface should be perfectly flat even without the use of glues or sealants, can be removed and re-used at any time.

Installazione prevista esclusivamente con prodotti AUTO-LEVELING nel formato 20x170.

You should use AUTO-ONLY products in the 20x170 size.

Installazione adatta unicamente ad ambienti INDOOR.

This system can be used for INDOORS installation only.

Si sconsiglia l'utilizzo di INSTA-TILE negli ambienti maggiormente umidi o sporchevoli, come bagno e cucina.

INSTA-TILE is not recommended in wet or easily dirtied areas, such as bathrooms and kitchens.

Il metodo INSTA-TILE permette di stendere le lastre senza alcuna fuga.

AUTO-LEVELING tiles can be installed with close joints.

INSTA-TILE

DRY FIXING

L'applicazione può avvenire in diverse situazioni:
-su massetto in cemento
-su massetto in cemento con impianto di riscaldamento
-su pavimento preesistente in ceramica, legno o linoleum
-su pavimento preesistente con impianto di riscaldamento
In tutti questi casi dev'essere utilizzato un materassino in sughero o in polietilene su cui stendere le lastre.
È possibile direttamente su moquettes di basso spessore senza l'ausilio del materassino.

It can be laid in different solutions:
-on top of cement screeds,
-on top of cement screeds with heating systems
-on top of existing ceramic, wooden or linoleum floorings
-on top of existing floorings with heating systems
In all these cases, a cork or polyethylene underflooring must be used.
The planks can also be laid directly on top of short-pile carpet, without needing the underflooring.

Il pavimento INSTA-TILE si puo' pulire con normali detergenti, utilizzando regolarmente il panno bagnato ed i vari sistemi mop.
Nel caso di versamento importante di liquidi, sollevare le lastre ceramiche nella zona interessata aiutandosi con una ventosa, asciugare o sostituire la porzione del materassino sottostante e ri-posizionare le piastrelle.

INSTA-TILE flooring can be cleaned with normal cleaning detergents, using a wet cloth or a traditional mop.
In the event of major spills, lift up the ceramic tiles in the affected area using a suction cup, dry or replace the area of underflooring below and refit the tiles.

Si sconsiglia l'utilizzo di INSTA-TILE in presenza di animali domestici.

We do not recommend use of the INSTA-TILE system in homes with pets.

CARATTERISTICHE

Wall&Porcelain nasce come evoluzione della ceramica da rivestimento tradizionale e allo stesso tempo riprende qualità tipiche del gres porcellanato, pur senza averne i limiti. È possibile produrre in W&P lastre ceramiche rettificate di grande formato, fino a 60x120 cm (tecnicamente non realizzabili in bicottura o monoporosa), leggere, maneggevoli, sottili (7 mm) e perfettamente planari, più facili da posare, lavorare e tagliare rispetto al gres, pratiche come i rivestimenti classici, ma inalterabili nel tempo e senza difetti post posa. W&P, oltre ad unire qualità tecniche di prodotto e praticità d'uso, incontra il design e permette di realizzare proposte sempre nuove e diversificate, in linea con le ultime tendenze e facilmente coordinabili con i pavimenti in gamma. Ispirazioni che spaziano dai wallpaper, fino alle superfici strutturate e 3D, per utilizzi molto diversi, ideali per la progettazione di tutti gli ambienti interni.

CHARACTERISTICS

Wall&Porcelain combines the qualities of conventional ceramic wall tiles with those of porcelain tiles while avoiding their respective limitations.W&P can be used to produce large-size rectified ceramic panels up to 60x120 cm in size (not technically possible for double-fired or monoporosa tiles). These panels are lightweight, thin (7 mm), easy to handle and perfectly flat. They are easier to install, work with and cut than porcelain and are just as practical as conventional wall tiles while also being supremely durable and free of post-installation defects.But along with technical qualities and practicality of use, W&P also attains a high level of design and can create ever new and diversified offerings that follow the latest trends and coordinate easily with the floor tiles in the range.The tiles draw inspiration from a range of sources including wallpapers and textured and 3D surfaces and are suitable for all interior applications.

CONSIGLI DI POSA E PULIZIA

AVVERTENZE GENERALI

Indipendentemente dal tipo di prodotto e formato scelto, prima di procedere con la posa è opportuno fare una verifica sul cantiere per valutare le condizioni dei sottofondi. La posa richiede le migliori condizioni del sottofondo. Che dovrà sempre essere:
-asciutto e stagionato
-planare e privo di fessurazioni
-pulito, libero da polvere detriti o grumi di cemento
-compatto e resistente
La perfetta riuscita di un pavimento o di un rivestimento è il frutto della combinazione di molteplici fattori; per ottenere il migliore effetto estetico nella posa è opportuno ricordare che i prodotti ABK Group prevedono un numero variabile di pattern grafici, la cui successione all'interno delle scatole avviene in modo del tutto casuale.

POSA DEI PRODOTTI RETTIFICATI

Per raggiungere un effetto ottimale ABK suggerisce di mantenere almeno 1 o 2 mm di fuga per una posa mono-formato e 2 mm per combinare formati misti nelle pose modulari suggerite dai cataloghi.

POSA DEI PRODOTTI NON RETTIFICATI

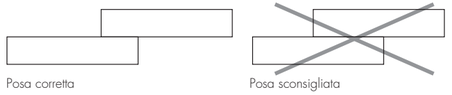
L'alto grado di greificazione delle piastrelle ABK comporta modeste tolleranze di calibro, pertanto nella posa dei prodotti a bordo naturale è consigliabile lasciare una fuga di almeno 3 mm fra le piastrelle.

OPERAZIONI PRELIMINARI

Una volta scelto il materiale da posare, coerentemente con i requisiti tecnici, lo stile e la destinazione d'uso degli ambienti, è bene seguire alcune raccomandazioni prima di procedere con l'installazione.:
-stendere a terra almeno 3mq di prodotto per controllare l'effetto d'insieme, avendo cura di verificarne accuratamente calibro, tonalità e scelta.
-Specie nel caso di prodotti con elevata variabilità grafica, è bene posare il materiale attingendo da più scatole, le variazioni grafiche e cromatiche del prodotto sono una caratteristica qualificante che l'abilità del posatore può valorizzare, al contrario un prodotto posato senza tenerne conto può risultare esteticamente poco gradevole.
-È opportuno evitare di segnare la parte superiore delle piastrelle con matite o pennarelli e dedicare particolare attenzione ai prodotti lucidi, patinati o lappati che dovranno essere coperti durante i lavori di cantiere.
-Attendere 48/72 ore prima di sottoporre il pavimento al normale transito.

La posa senza fuga, soprattutto nei grandi formati è fortemente sconsigliata dai maggiori produttori di collante per i seguenti motivi:
Difficoltà di assorbimento di eventuali movimenti strutturali in assenza di elementi comprimibili
Diverso comportamento dilatometrico fra piastrelle e massetto, in presenza di elevate escursioni termiche
Difficoltà di realizzazione di una duratura ed efficace stuccatura
Abk sconsiglia assolutamente pose senza fuga, per le quali si declina ogni responsabilità.

Durante le operazioni di posa, nel caso venga scelto uno schema sfalsato, evitare di far coincidere i vertici di una piastrella con la metà delle altre a fianco.
Soltanto i prodotti AUTO-LEVELING si prestano ad essere posati seguendo liberamente ogni schema di posa.



Posa corretta

Posa sconsigliata

STUCCATURA

1) Qualora non si utilizzasse la boiacca composta da cemento e sabbia, si consiglia di utilizzare colori di stucco su tono (possibilmente non utilizzare su materiali di colore chiaro stucchi di colore scuro, tipo nero, blu, rosso) e di verificare la compatibilità dei riempitivi per fughe con il prodotto ceramico.
2) Riempire le fughe con gli stucchi solo quando il pavimento è calpestabile, togliendo preventivamente dalle fughe ogni tipo di residuo.
3) Eseguire la stuccatura a "regola d'arte", seguendo le indicazioni del progettista, del responsabile di cantiere e del capitolato di posa.
4) Stuccare piccole superfici per volta (4/5 mq) e asportare le quantità eccedenti con spugne o stracci umidi (di sola acqua pulita).
5) Stucchi cementizi non additivati: seguire attentamente le indicazioni dei fabbricanti, a fine giornata pulire i residui di posa con spugna appena bagnata.
6) Stucchi epossidici o additivati (con lattici, ecc.): seguire attentamente le indicazioni dei fabbricanti, perché il loro rapido indurimento può richiedere pulizie molto laboriose, specialmente se la superficie delle piastrelle è antiscivolo, ruvida o strutturata.

INSTALLATION AND CLEANING ADVICE

GENERAL WARNINGS

Regardless of the chosenproduct type or size, an on-site inspection should be carried out prior to installation to assess the conditions of the substrates.Perfect substrate conditions are essential for a successful installation.Substrates must be:
-dry and properly cured
-flat and free of cracks
-clean and free of dust, debris or lumps of cement
-compact and strong
The success of a floor or wall tile installation is the result of a combination of multiple factors; to achieve the best possible aesthetic effect in installation, remember that ABK Group products come in a variable number of graphic patterns packed in boxes in a completely random sequence.

INSTALLATION OF RECTIFIED-EDGED TILES

For optimal results, ABK recommends allowing a joint of at least 1 or 2 mm when laying same-sized tiles and 2 mm for different-sized tiles laid using the modular systems described in the catalogues.

INSTALLATION OF NON-RECTIFIED TILES

The high degree of vitrification of ABK tiles means dimensional tolerances are low. Therefore, when laying tiles with natural press-formed edges, at least a 3mm joint should be allowed between each tile.

PRELIMINARY OPERATIONS

It is advisable to follow some recommendations before proceeding with the installation of the selected tiling material, which should be carried out in compliance with the technical requirements, style and intended application;
-Place some tiles (at least 3 m^2) over the flooring surface to check the final effect, making sure you have the right tile size, shade, and quality class.
-In the case of products whose graphics tend to differ considerably from one tile to the next, it is advisable to take the tiles from different boxes and mix them. The graphic and colour variations of the tiles are an important feature which can be enhanced by a skilled tile layer. Overlooking such features, on the contrary, may lead to poor aesthetic results.
-Avoid marking the front of the tiles with pencils or markers. Be particularly careful with glossy, matt or lapped tiles, which should be kept covered during building work.
-Wait 48/72 hours before walking over the newly laid tiles.

Jointless tile installation, particularly in the case of large-size tiles, is strongly advised against by most adhesive manufacturers for the following reasons:
Any structural adjustments may not be absorbed due to the lack of compressible material.
Wide temperature ranges may cause expansion effects between the tile and screed.
Effective, durable grout joints may be difficult to achieve.
ABK strongly advises against jointless tile installation and cannot be held liable for any damage deriving therefrom.

When laying tiles in a staggered pattern, make sure there are no tiles positioned with the corner coinciding with the centre of the adjacent tiles.
Only AUTO-LEVELING products are suitable for all installation patterns.

GROUTING

1)Should a grout made of cement and sand not be used, it is recommended to use shade-on-shade grouts (do not use dark grouts, such as black, blue or red, on bright materials) and to verify the compatibility of the grouts with the ceramic tile.
2)Fill the grout lines with the grout only when the floor has sufficiently set to be ready to tread on, removing any residue from the gout lines.
3)Carry out a state-of-the-art grouting following the layer and technician's instructions and the technical specifications.
4)Grout small areas of the surface at a time (4m≤ to 5m≤) and remove excess grout with a sponge or a wet cloth (with clean water).
5)Non-added cement grouts: follow the manufacturer's instructions carefully and at the end of the working day clean the surface with a slightly damp sponge.
6)Epoxy grouts or added grouts (with latex, etc): follow the manufacturer's instructions to the letter as rapid hardening can lead to difficult cleaning operations, especially in case of anti-slip, rough or textured tiles.

LAVAGGIO DOPO LA POSA

Il lavaggio dopo la posa è una fase di fondamentale importanza per tutti gli interventi successivi e per la manutenzione.
La pulizia di fine cantiere fatta con prodotti a base acida tamponati, quali ad esempio Deterdek di Fila o Cement Remover di Faber etc. va eseguita una sola volta e presenta l'ulteriore vantaggio di conferire uniformità cromatica alla superficie.
Con il lavaggio acido dopo la posa si eliminano i residui di posa e il normale sporco di cantiere come: malta, colla, pittura, sporco da cantiere di varia natura. E' bene sapere che oltre il 90% delle contestazioni in cantiere è dovuto ad un cattivo, o addirittura inesistente, lavaggio con detergente acido dopo posa. Per evitare che un prodotto a base acida usato per la prima pulizia vada ad intaccare il riempimento a base cementizia delle fughe, è necessario, prima dell'operazione di pulizia, bagnare il pavimento affinché le fughe vengano impregnate e pertanto protette dall'azione corrosiva dell'acido stesso.
È opportuno:
• Togliere con appositi detergenti a base alcalina sostanze grasse o simili
• Procedere al lavaggio dopo la posa
• Risciacquare abbondantemente il pavimento, raccogliendo l'acqua residua.
• La pulizia si esegue dopo 4-5 giorni dalla stuccatura (lo stucco deve indurire) e non oltre i 10 giorni, oltre questi tempi la pulizia può diventare molto più laboriosa; attenersi scrupolosamente ai consigli riportati dal produttore di detergenti.
Fare sempre test preventivi (su una piastrella non posata), in particolare per prodotti lappati o levigati.

CLEANING AFTER INSTALLATION

The cleaning after installation is of fundamental importance for all the subsequent steps and for a correct maintenance.
Post-installation cleaning using acid detergents with a padding action such as Fila Deterdek or Faber Cement Remover must be carried out only once and only if this would result in the added bonus of giving the surface a more uniform aspect.
Acid-cleaning will remove all residue associated with the installation and works in general, such as mortar, adhesive, paint and dirt. It is important to underline that 90% of complaints are due to a bad, or even inexistent cleaning after installation. In order to make sure that an acid detergent used for the cleaning does not compromise the filling of grout lines, it is necessary, before proceeding with cleaning, to wet the floors so that the grout lines are impregnated and protected from the corrosive action of the acid.
It is recommended to follow these steps:
First, remove any grease or similar substance from the floor using alkaline detergents
Proceed with the cleaning of the surface
Rinse the floors with an abundance of water
The cleaning must be carried out 4-5 days after grouting (the grout must season) and within a maximum of 10 days after grouting, as, beyond this period of time the cleaning can be difficult, carefully follow the manufacturer's instructions for the use of detergents.
It is always recommended to carry out a test on a sample tile (not installed), in particular in case of honed or polished products.

POSA E PULIZIA DI DECORI CON MATERIALI NATURALI

Per la ceramica sono consigliati i normali prodotti in commercio, evitando quelli abrasivi.

LAYING AND CLEANING DECORS MADE BY NATURAL COMPONENTS

FASCIA ARDESIA BRONZO / ARDESIA GRIGIO 4x30 cm

Natural stone component: sheet of natural slate from India produced using exclusive techniques. Substrate: slabs of magnesite, a perfectly stable material that is fireproof and resistant to mould and fungi as well as all household acids. Installation and grouting: use normal ceramic mosaic adhesives and employ the back-buttering technique. Use exclusively epoxy grouts, being sure to remove any excess before it has dried completely.
For maintenance and cleaning, use normal commercially-available products designed for marble/natural stone. Do not use abrasive products.

FASCIA ESSENZE MIX 5x30 cm / LIST. WOOD 5x40 cm

Wood component: wooden planks and beams recovered from demolished attics or from old stables, barns, tool sheds, etc. This material originates from the foothills of the Alps in Italy's Trentino Alto Adige region and is estimated to be at least a hundred years old.
Ceramic component: each piece is hand finished and glazed and may consequently vary in terms of colour and/or finish.
Substrate: the wood is mounted on magnesite panels, a perfectly stable and fireproof material that is resistant to mould and fungi as well as all household acids.
Installation: use normal commercially-available ceramic mosaic adhesives. Use the back-buttering technique normally employed for installing mosaics.
Grouting: use paper tape to protect the wood component and preserve the wood's timeworn texture. Do not remove the tape until the grout has dried completely. Use only epoxy grouts.
Maintenance and cleaning: the wood is coated with water-based varnish and finished with natural wax. It is then treated with a colourless water-repellent solution. For cleaning and maintenance, use normal commercially-available wood products suited to the varnished and waxed finish. For the ceramic component, normal commercially-available products are recommended. Avoid using abrasive products.

PULIZIA E MANUTENZIONE

MANUTENZIONE ORDINARIA

Si consiglia l'utilizzo di un comune detergente neutro diluito in acqua calda. Evitare l'utilizzo di prodotti acidi, alcalini, ceranti e/o impregnanti.
Nella pulizia ordinaria occorre limitare al massimo l'uso di mezzi abrasivi (ad esempio: paglietta di metallo, spugnette di ferro o acciaio). Questa precauzione diventa un obbligo nel caso di piastrelle con superficie lucida, più esposte ad effetti visibili di scalfitture, graffi…
In caso di sporchi più intensi o di superfici particolarmente strutturate, usare un detergente a base alcalina risciacquando al termine del lavaggio.
Nella pratica quotidiana occorre considerare che certi tipi di sporco (polvere, sabbia) aumentano l'effetto abrasivo del traffico pedonale. Cercare quindi di prevenire la presenza di questa tipologia di sporco dall'esterno, predisponendo l'utilizzo di zerbino o stuoino all'ingresso.

RIMOZIONE DI PATINE LUCIDE

Nei normali detergenti in commercio sono a volte contenute cere o additivi lucidanti che, lavaggio dopo lavaggio, depositano sul pavimento patine lucide, causa di noiose alonature. Patine di questo tipo possono essere depositate anche da alcuni stucchi per le fughe. Semplici alimenti come Coca Cola, vino, acqua, etc., cadendo sul pavimento tolgono questa patina lucida e ripristinano l'aspetto originale più opaco delle piastrelle. In mezzo al pavimento più lucido, le zone senza cera appaiono come aloni opachi, in realtà sono le uniche parti pulite del pavimento.
In questi casi, dopo aver fatto un test preventivo, bisogna:
• Togliere la patina lucida da tutto il pavimento con un tipo di detergente a base acida.
• Utilizzare per le pulizie quotidiane, detergenti neutri che non contengono né cere né patine lucidanti.

MANUTENZIONE STRAORDINARIA

Nel caso di tracce di sporco resistente alla pulizia ordinaria si raccomanda l'utilizzo di un detergente adeguato in funzione del tipo di sporco e comunque, prima dell'uso, fare sempre test preventivi su una piastrella non posata. Nella tabella "PRODOTTI PER LA PULIZIA E LA MANUTENZIONE" sono indicati i detergenti efficaci in funzione del tipo di macchia.

PAVIMENTI E RIVESTIMENTI METALLIZZATI

Per la pulizia e manutenzione di piastrelle metallizzate si raccomanda di non usare assolutamente detergenti acidi o alcalini. Usare esclusivamente prodotti con PH neutro come ad esempio Fila Cleaner o Floor Cleaner di Faber. In ogni caso verificare sempre prima il prodotto su una porzione di materiale non posato ed evitare di lasciare il detergente sulle piastrelle per più di 10-15 min. Risciacquare sempre abbondantemente con acqua.

TRATTAMENTO PRODOTTI LAPPATI E LEVIGATI

Lappatura e levigatura sono lavorazioni che prevedono sempre l'asportazione di una parte superficiale dello smalto o del corpo stesso della piastrella. In tutti i pavimenti ceramici disponibili sul mercato, tale lavorazione, pur in presenza di materiali vetrosi o a bassissimo assorbimento, può comportare l'apertura di microporosità superficiali che a contatto con particolari tipi di sporco, possono risultare di difficile pulizia o presentare aloni difficilmente rimuovibili.

RACCOMANDAZIONI

Ricordiamo di non usare mai detergenti a base di acido fluoridrico (HP) o dei suoi composti, compresi antiruggine o smacchiatori di tipo spray che spesso lo contengono. Il danno che si potrà provocare sarà irreparabile in quanto non esiste pavimento sul mercato resistente a tale acido.

AVVERTENZE

Le caratteristiche di pulizia dei materiali variano in modo significativo in funzione delle diverse modalità di installazione, condizioni d'uso, tipologie di superfici e ambiente. In linea generale all'aumentare delle caratteristiche di antiscivolosità delle piastrelle, aumentano le difficoltà di pulizia. L'operatore professionale incaricato dell'intervento di manutenzione e pulizia, dovrà sempre procedere ad una preliminare verifica empirica, possibilmente su una porzione di materiale non posato, per ogni singolo tipo di intervento.
In caso di condizioni d'uso particolarmente gravose, di errata installazione o di pulizie effettuate in modo inadeguato Abk declina ogni responsabilità in merito all'efficacia delle operazioni di pulizia e manutenzione. Resta inteso che Abk non potrà essere ritenuta responsabile per eventuali danni o difetti dovuti ad errata installazione, negligente pulizia e manutenzione o inadeguata scelta della tipologia dei materiali installati e degli adesivi utilizzati con riguardo alla destinazione.

CLEANING AND MAINTENANCE

DAILY MAINTENANCE

It is recommended to clean the floor using a neutral detergent diluted in hot water. Avoid the use of acid, alkaline, waxing and/or impregnating products.
During ordinary cleaning procedures, it is recommended to limit the use of abrasive means such as scouring pads, iron and/or steel sponges. Taking this precaution is a must on glossy tiles, as they are more liable to scratching.
In case of intense dirt or textured surfaces, use an alkaline detergent, rinsing the floor with an abundance of water.
It is important to underline that certain types of dirt like dust or sand, increase the abrasive effect of foot traffic on the surface. The use of a door mat at the entrance can help prevent this.

REMOVAL OF FILMS ON THE FLOOR

The standard detergents available on the market sometimes contain waxes or polishing additives that, cleaning after cleaning, create a film on the floor and cause rims. This type of film can also develop when using certain types of grouts. Every-day stains on the floor, such as cola, wine, water, etc. remove this film and reveal the original, more opaque aspect of the tiled surface. On a glossy floor, these areas with no wax appear as rims but, in actual fact, they are the only clean areas of the floor itself.
In such cases, after having carried out a test, it is necessary to:
Remove the film from the floor using an acid detergent.
Use neutral detergents, which do not contain wax or polishing additives for everyday cleaning.

EXTRAORDINARY MAINTENANCE

In case of stains that are resistant to standard cleaning operations, it is recommended to use a specific detergent depending on the type of dirt and, every single time before using such detergent, to carry out a test on a non-installed sample tile. The chart "REMOVE STAINS" indicates the recommended detergents that are effective for certain specific stains.

METALLISED FLOOR AND WALL COVERINGS

For the cleaning and maintenance of metallised tiles, it is recommended not to use acid or alkaline detergents. Use products with neutral PH such as Fila Cleaner or Faber Floor Cleaner. Every single time, test the product on a sample tile that has not been installed and do not leave the detergent on the tiles for more than 10-15 minutes. Always rinse the surface with an abundance of water.

TREATMENT OF HONED AND POLISHED TILES

Honing and polishing are manufacturing processes that always remove a superficial part of the glaze or of the body of the tile itself. All honed and/or polished ceramic tiles available on the market have a micro-porous structure that, even when using low absorption vitreous materials, are vulnerable to attack from certain types of dirt that can attack the micro-porous structure and make cleaning operations very difficult.

RECOMMENDATIONS

Never use hydrofluoric acid-based detergents or its derivatives, such as rust-preventing products or spray stain-removers that often contain hydrofluoric acid. The use of hydrofluoric acid will irreparably damage the surface, as no ceramic tile floor available on the market is resistant to this acid.

WARNING

The cleaning features of materials considerably vary depending on the installation pattern, the conditions of use and the type of surface. As a general rule, as the anti-slip value of ceramic tile increases, the cleaning operations become more difficult. The professional technician in charge of the cleaning and maintenance must always carry out a preliminary test on a sample tile that has not been installed before proceeding with any cleaning operation.
In case of special conditions of use, incorrect installation or inadequate cleaning, Ceramiche ABK will not be responsible for the effectiveness of cleaning and maintenance procedures. It is agreed that ABK will not be responsible for any damage or defects that are due to incorrect installation, cleaning and maintenance or due a wrong choice of materials and adhesives.
The above-stated instructions are merely indicative. For in-depth information, please consult the specific documents that are available on the catalogues and web-site of the manufacturers of detergents for ceramic floors.
